

Enterprise Hotel Analytics Dashboard

Business Requirements Document

Prepared by: Renzo Del Grosso

Tools: Power BI | DAX | Power Query

Date: 2026

1. Project Overview

Background

The hospitality industry generates large volumes of operational and financial data across hotels, departments, booking channels, and customer segments.

However, raw transactional data alone does not provide sufficient insight into:

- Revenue performance
- Cost efficiency
- Profitability drivers
- Operational opportunities

This project develops an interactive Power BI analytics solution to transform hotel financial data into actionable business insights.

2. Business Objective

The objective of this dashboard is to provide management with visibility into hotel financial performance and operational efficiency.

The solution aims to answer:

- Which hotels generate the highest revenue?
 - Which departments contribute most to profitability?
 - Where are costs concentrated?
 - Which booking channels are most profitable?
 - Which market segments drive business performance?
-

3. Stakeholders

Stakeholder	Information Required
General Manager	Overall financial performance
Finance Team	Revenue, costs and profitability
Operations Managers	Department efficiency
Sales & Marketing	Channel and segment performance
Regional Managers	Hotel comparisons

4. Key Business Questions

Revenue Analysis

- How is revenue changing over time?
 - Which hotels contribute the most revenue?
 - Which booking channels generate the highest sales?
-

Cost Analysis

- Which departments have the highest costs?
 - Are costs increasing faster than revenue?
 - Where can efficiency improvements be made?
-

Profitability Analysis

- Which properties have the strongest margins?
 - Which departments generate the most profit?
 - Is revenue growth translating into profit growth?
-

5. Required KPIs

The dashboard must display:

KPI	Purpose
Total Revenue	Measure business income
Total Cost	Monitor expenditure
Gross Profit	Measure profitability
Gross Profit Margin %	Evaluate efficiency
Department Profitability	Identify operational drivers

6. Dashboard Requirements

The report must include:

Executive Overview

Provides management-level summary.

Hotel Performance

Compares properties.

Revenue & Channel Analysis

Examines revenue sources.

Operational Profitability

Analyses department performance.

Financial Deep Dive

Provides detailed financial investigation.

7. Technical Requirements

The solution should include:

- Power Query transformations
 - Star schema data model
 - Reusable DAX measures
 - Interactive filtering
 - Drill-through capability
 - Professional dashboard design
-

8. Success Criteria

The project is considered successful if users can:

- ✓ Identify revenue drivers
- ✓ Understand cost structure
- ✓ Compare hotel performance
- ✓ Evaluate profitability
- ✓ Make data-driven decisions
